1 Developer Identity & Profile

FIELD	VALUE
GitHub Handle	`EGABO-TECH`
Real Name	Egabo Aaron
Location	Kampala, Uganda UG
Account Created	January 27, 2026
Last Active	June 20, 2026
GitHub User ID	257617596
Email (public)	aaronegabo@gmail.com
LinkedIn	linkedin.com/in/egaboaaron
Twitter / X	@WanEgabo
Company / Firm	RENOA (co-founder)

Bio

> *"Tech, Innovation and Curiosity all curated in my pragmatic mind."*

In his own words from his profile README:

> *"I am a software engineer who likes to build things that solve community problems. I spend most of my time writing clean backend code and designing simple, clear layouts. I focus on building reliable software—like EcoFarm and MedSwift—that stays up and running even when the internet or servers slow down."*

Egabo Aaron is a Ugandan software engineer with a clear mission: **build technology that solves real African community problems**. He specializes in backend-heavy applications with offline resilience, civic tech, health tech, and agri-tech. He co-founded **RENOA**, a software development firm, and maintains a side YouTube channel on psychology — reflecting a broad, intellectually curious mind that bridges engineering, philosophy, history, and art.

2 Account Statistics at a Glance

30	14	7 ⭐	5 mo
PUBLIC REPOS	FOLLOWERS	TOP REPO STARS	ACCOUNT AGE

METRIC	VALUE
Public Repositories	30
Followers	14
Following	16
Public Gists	0
Account Age	~5 months (very new)
Most-Starred Repo	ESMS — 7 ⭐
Second Most Starred	Simple-C-Calculator — 6 ⭐
Third Most Starred	Simple-C-Payroll-Calculator — 3 ⭐
Languages Used	TypeScript, JavaScript, C, Rust, HTML/CSS, Python, SQL
Original Repos	~16–17
Forked Repos	~13

> 📌 **NOTE**
> The account is only ~5 months old, making the volume and quality of original work remarkably impressive. ESMS alone demonstrates enterprise-grade thinking.

3 Tech Stack & Tools

Languages

LANGUAGE	USE CASE
TypeScript	Primary language for enterprise-grade projects (ESMS)
JavaScript	Web apps, backend assignments, tooling
C	Systems programming fundamentals
Rust	Currently learning (RUST-COHORT-2)
HTML5 / CSS3	Frontend interfaces
Python	Mentioned in bio for scripting/AI tooling
SQL / PostgreSQL	Database layer for ESMS, ACCOMMODATE-ME

Frameworks & Platforms

TOOL	PROJECT
Next.js 14 (App Router)	ESMS, general frontend
Supabase (PostgreSQL)	ESMS database layer
Vite	ExFlo frontend
Node.js	Backend development
Tailwind CSS	ESMS UI
Vanilla JS / PWA	MedSwift
LangChain	ExFlo AI agent
Gemini 1.5 Flash / 2.0	MedSwift AI core
OpenRouter / Claude	MedSwift fallback tier
MTN MoMo / Airtel Money	ESMS payment integration
MiniPay (blockchain)	ExFlo crypto payments
HTML5 Canvas	KUA flyer generator
OCR.space API	MedSwift label scanning

Databases & APIs

- PostgreSQL via Supabase
- openFDA, EMA, DrugBank, ChEMBL, WHO EML (MedSwift)
- Stanbic/Centenary banking APIs (ESMS)
- Local payment APIs: MTN MoMo, Airtel Money

Interests

Systems Architecture | Offline Data Syncing | AI & Multimodal Intelligence | Web3 / Blockchain Payments | AgriTech | HealthTech | EdTech

4 Repository Overview

Complete Repository Table

#	REPOSITORY	TYPE	LANGUAGE	STARS	DESCRIPTION
1	ESMS	Original	TypeScript	⭐ 7	Enterprise University Management System
2	Simple-C-Calculator	Original	C	⭐ 6	First C project — arithmetic calculator
3	Simple-C-Payroll-Calculator	Original	C	⭐ 3	C payroll calculator with tax logic
4	MedSwift	Original	JavaScript	—	AI pharmaceutical intelligence PWA
5	ExFlo	Original	JavaScript	—	Agentic AI travel orchestration platform
6	KUA	Original	JavaScript	—	Social marketing command center SPA
7	ACCOMMODATE-ME	Original	—	—	Student housing platform
8	AMA-TUALU-FOUNDATION	Original	—	—	Youth empowerment nonprofit website
9	RENOA	Original	—	—	Software firm website
10	Resume-Builder	Original	HTML/CSS/JS	—	Interactive resume & portfolio builder
11	MAMA-IANS-SHOP	Original	—	—	E-commerce shop website
12	RUST-COHORT-2	Original	Rust	—	Rust learning tracker (zero to pro)
13	BD-WEEK1	Original	JavaScript	—	BeTechified Africa backend week 1
14	BD-WEEK2	Original	JavaScript	—	BeTechified Africa backend week 2
15	odin-recipes	Original	HTML	—	The Odin Project recipe assignment
16	system-design-101	Fork	—	—	System design visual guide reference
17	gstack	Fork	—	—	Garry Tan's Claude Code dev toolkit
18	open-design	Fork	—	⭐ 1	Open-source design tool (Claude alternative)
19	maxun	Fork	—	—	No-code web scraping platform
20–30	*(Additional repos)*	Mix	Mix	—	See full list on GitHub profile

5 Original Projects — Deep Dive

5.1 — FLAGSHIP / SIGNATURE PROJECTS

🏛️ ESMS — Enterprise School Management System

TypeScript ⭐ 7 Stars Live on Vercel

🔗 github.com/EGABO-TECH/ESMS 🌐 esms-beta.vercel.app 📅 Created: April 25, 2026

> *"The Definitive Digital Infrastructure for Modern Higher Education in Uganda."*

ESMS is unquestionably Egabo's **most ambitious and mature project**. It is a fully-designed, enterprise-grade University Management System built specifically for the Ugandan higher education context.

Architecture — 4-Layer System

1. **Frontend Layer:** Next.js 14 (App Router) + Tailwind CSS with "Editorial Minimalism" design philosophy and glassmorphic UI
2. **Service Layer:** Modular services covering Academics, Finance, Admissions, and Staff workflows
3. **Integrations Layer:** Local Ugandan payment gateways — MTN MoMo, Airtel Money, Stanbic Bank, Centenary Bank
4. **Database Layer:** PostgreSQL via Supabase in 3NF-compliant schema with real-time sync

Key Features

- Multi-tenant, multi-role RBAC (Role-Based Access Control)
- Automated academic workflows (enrollment, grading, scheduling)
- UGX-integrated financial services (local Ugandan Shilling)
- NCHE (National Council for Higher Education) compliance
- Layered, horizontally scalable architecture

Why it matters: This is not just a CRUD app. ESMS represents the kind of institutional-grade software that Uganda's universities actually need — localized payment integration, NCHE compliance, offline-aware data handling — all built by a 5-month-old GitHub account.

💊 MedSwift — Pharmaceutical Intelligence Engine

Vanilla JS / PWA | Deployed on Vercel

🔗 github.com/EGABO-TECH/MedSwift

> *"Scan the Truth. Secure Your Health."*

MedSwift is an **enterprise-grade Multimodal Pharmaceutical Intelligence PWA** that turns a mobile camera into a medical auditing tool. It identifies drugs, verifies their authenticity, and extracts clinical intelligence in real-time — critical for healthcare workers in low-resource settings.

Intelligence Architecture — Triple-Tier Resilience

1. **Stage 1 — OCR Pre-processor:** Extracts text from drug packaging using the `OCR.space` engine
2. **Stage 2 — Tiered AI Reasoning:**
   - **Tier 1 (Sentinel):** Gemini 2.0 Flash (ultra-fast real-time analysis)
   - **Tier 2 (Expert):** Gemini 1.5 Pro (complex/degraded label reasoning)
   - **Tier 3 (Safety Net):** OpenRouter (Claude/Gemini) for ultimate redundancy
3. **Stage 3 — Global Dataset Cross-Referencing:** Queries openFDA, EMA, Health Canada DPD, DrugBank, ChEMBL, and WHO Essential Medicines List

Key Capabilities

- **MedSwift Vision™:** Zero-shot drug identification from live video or image uploads
- **Truth Report™:** Automated clinical cards detailing identity, authenticity, indications
- **Audit-Ready PDF Reports:** Exportable official documentation
- **Offline-first PWA:** Works in low-connectivity African healthcare settings

Why it matters: This directly addresses a real African healthcare crisis — counterfeit and unverified medicines. The architecture shows sophisticated multi-model AI orchestration with Gemini AI at its core.

✈️ ExFlo — Agentic AI Travel Ecosystem

JavaScript / Vite | LangChain | Blockchain

🔗 github.com/EGABO-TECH/ExFlo

> *"A revolutionary autonomous orchestration layer for the global tourism industry."*

ExFlo replaces static travel search engines with an **AI Pilot** — an autonomous agent that plans, books, and coordinates entire journeys in a single, seamless "Flow."

Key Innovations

- **The AI Pilot:** Autonomous agent with real-time trip monitoring and automated re-planning — no manual intervention needed when flights are delayed or bookings fail
- **MiniPay Integration:** Native blockchain/cryptocurrency payments via MiniPay ecosystem — frictionless global tourism payments
- **One-Booking Engine:** Unified checkout for flights, hotels, and activities
- **LangChain:** Used for the agentic orchestration layer

5.2 — WEB APPS & TOOLING

KUA — Social Marketing Command Center

JavaScript / SPA

github.com/EGABO-TECH/KUA Architecture: Modular SPA (index.html, app.js, styles.css, tailwind)

> *"Your hyper-advanced social marketing command center."*

A premium client-side SPA featuring the "Clairon AI" dark-mode aesthetic — deep charcoal tones, electric orange accents, and volumetric CSS-based lighting.

- **Flyer Generator Engine:** HTML5 `<canvas>` rendering pipeline with drag-and-drop, dynamic typography, and theme layers (Classic, Midnight, Neon)
- **Multi-Channel Broadcast Center:** Deploy content to WhatsApp, Instagram, X/Twitter, LinkedIn with automated clipboard injection
- **localStorage Telemetry:** Fully client-side — no backend required

Resume Builder — Interactive Portfolio Generator

HTML/CSS/JS

github.com/EGABO-TECH/Resume-Builder

> *"A sleek, responsive, single-file web application — both a dynamic digital portfolio and a high-fidelity physical resume generator."*

- **Dynamic Theme Engine:** 4 visual aesthetics (Burgundy, Deep Slate, Emerald, Navy)
- **Live In-Browser Editing:** Full `contenteditable` integration
- **Print-Ready Stylesheet:** Custom `@media print` CSS rules for perfect `Ctrl+P` output

5.3 — CIVIC, SOCIAL & NONPROFIT PLATFORMS

ACCOMMODATE-ME — Student Housing Initiative

github.com/EGABO-TECH/ACCOMMODATE-ME

> *"Focus on your future, we'll handle the rental hustle."*

A centralized housing platform connecting students with verified landlords — solving the chaos and distrust of student rental markets in Uganda.

- **Verified Housing:** Direct landlord connections screened for trust
- **Safety and Comfort:** Listings meet rigorous property standards
- **Seamless Transitions:** Simplified onboarding for relocating students

🌍 AMA-TUALU FOUNDATION — Youth Empowerment Website

🔗 github.com/EGABO-TECH/AMA-TUALU-FOUNDATION 📍 Adjumani, West Nile, Uganda — Registered Nonprofit

> *"We Are Together" — Empowering young Africans in West Nile, Uganda.*

A **real-world registered nonprofit organization** based in Adjumani. Not just a project — organizational infrastructure for a registered foundation.

Five Pillars: Youth Leadership · Digital Literacy · Mentorship · Community Impact · "The Wisdom Box" Membership

Target Demographic: Youth aged 15–35 in West Nile, Uganda

🏢 RENOA — Software Development Firm Website

🔗 github.com/EGABO-TECH/RENOA

RENOA is the **software development firm co-founded by Egabo Aaron**. The GitHub repo hosts the firm's public website, focused on building software and helping others solve technical problems.

5.4 — BACKEND DEVELOPMENT COURSEWORK

These repositories represent coursework from the **BeTechified Africa** program — a structured backend development training cohort.

📦 BD-WEEK1 & BD-WEEK2 — BeTechified Africa Backend Cohort

JavaScript

🗓️ Created: June 20, 2026

BD-WEEK1: Week 1 Assignment — Node.js fundamentals, REST APIs, routing, middleware, HTTP servers.

BD-WEEK2: Week 2 Assignment — Both created on the same day, demonstrating consistent structured progress through the curriculum.

5.5 — C LANGUAGE FUNDAMENTALS

🔢 Simple-C-Calculator

C ⭐ 6 Stars

github.com/EGABO-TECH/Simple-C-Calculator Tags: beginner-project c calculator programming-fundamentals

> *"My first C project: a basic arithmetic calculator designed to practice control flow, switch statements, and user input handling."*

Egabo's **first C program**. The 6 stars it received is remarkable for a beginner project — suggesting genuine community appreciation. Demonstrates intentional discipline in stepping into systems programming from JavaScript.

💰 Simple-C-Payroll-Calculator

C ⭐ 3 Stars

github.com/EGABO-TECH/Simple-C-Payroll-Calculator

A follow-up C project applying fundamentals to payroll computation — tax logic, deductions, net pay calculation. Moving from "simple calculator" to "payroll calculator" shows deliberate skill-building and applying C to domain problems.

5.6 — LEARNING & EXPLORATORY PROJECTS

🦀 RUST-COHORT-2 — Rust Learning Tracker

Rust

github.com/EGABO-TECH/RUST-COHORT-2 Created: June 23, 2026

> *"Personal Tracker for Rust Progress from Absolute Zero to Pro"*

Egabo's **Rust learning journal**. Learning Rust while simultaneously building enterprise TypeScript apps and C projects demonstrates exceptional intellectual breadth.

🍝 odin-recipes — The Odin Project

HTML

The classic beginner HTML project from The Odin Project curriculum. Likely one of Egabo's earliest repos, serving as evidence he followed structured learning paths before building production-grade systems.

6 Forked Repositories

These repositories reveal what technologies and ecosystems Egabo is actively studying.

REPOSITORY	DESCRIPTION	WHY FORKED
system-design-101	System design visual guide for interviews (ByteByteGo)	Studying distributed systems & architecture patterns
gstack	Garry Tan's 23-tool Claude Code dev setup	Interest in agentic AI dev tooling
open-design ⭐1	Local-first open-source Claude Design alternative	Exploring AI-assisted design workflows
maxun	No-code web scraping / AI data extraction platform	Interest in data extraction & web automation

Patterns in Forked Repos:

- **System design** — actively building knowledge for scalable architecture
- **Agentic AI tooling** — studying how AI coding agents work under the hood
- **No-code / automation** — interest in making powerful tools accessible

7 Developer Identity & Themes

🌍

The African Problem-Solver

Every significant project solves a specific Ugandan/African problem. ESMS → university admin; MedSwift → counterfeit medicine; ACCOMMODATE-ME → student housing; AMA-TUALU → West Nile youth development.

🤖

The AI-First Builder

MedSwift's triple-tier Gemini pipeline, ExFlo's LangChain agent, ESMS's AI workflows — AI is the core intelligence layer, not a feature add-on.

📐

The Systems Thinker

ESMS reveals 4-layer decoupled architecture, 3NF database normalization, horizontal scalability, and RBAC at enterprise scale — unusual for 5 months of activity.

🎯

The Ambitious Learner

Simultaneously learning JS/TS (production), C (fundamentals), Rust (cutting-edge), Next.js (frameworks), Supabase (databases), and LangChain (agentic AI).

8 Strengths & Observations

💡 **STRONGEST AREAS — BASED ON EVIDENCE**

✅ **Problem Definition:** Every project has a clear, real-world problem statement — not "I built a to-do app," but "I built a university system compliant with NCHE regulations."

- ✅ **Documentation Quality:** READMEs are detailed, professionally written, with logos, badges, and architecture sections — a rarity at this experience level.
- ✅ **AI Integration:** MedSwift's triple-tier AI pipeline is genuinely sophisticated — showing awareness of model failure modes and fallback design.
- ✅ **Africa-First Design:** Explicitly localizing software for Uganda (MTN MoMo, UGX currency, NCHE compliance) rather than blindly copying Western patterns.
- ✅ **Breadth of Stack:** Comfortable across frontend, backend, systems (C), and ML tooling — a rare combination.
- ✅ **Civic Engagement:** AMA-TUALU Foundation and ACCOMMODATE-ME show he builds software for community impact, not just commercial gain.
- ✅ **Learning Public:** RUST-COHORT-2 shows willingness to learn in public — a genuine growth mindset.

9 Growth Areas & Trajectory

📌 **OBSERVED FROM THE REPOSITORY PATTERN**

- ⬅ END **Testing & CI/CD:** No evidence of automated test suites (jest, vitest, etc.) or GitHub Actions pipelines. As ESMS matures, this becomes critical.
- ⬅ END **Contribution to Open Source:** Most forked repos show zero contributions upstream. Engaging with original projects could accelerate skill growth and network building.
- ⬅ END **Deployment & DevOps:** Vercel is used, but no Docker, Kubernetes, or infrastructure-as-code patterns are visible yet.
- ⬅ END **Mobile Native:** MedSwift and ACCOMMODATE-ME are natural candidates for React Native or Flutter — expanding impact significantly.
- ⬅ END **Community Building:** 14 followers after 5 months is low for the quality produced. Blog posts, dev.to articles, or YouTube tutorials could accelerate the profile.

Trajectory Prediction

> *Based on the pattern: `odin-recipes` (pure HTML) → `Simple-C-Calculator` → `ESMS` (enterprise TypeScript) → `MedSwift` (multimodal AI) — Egabo's trajectory is **sharply upward**. In 5 months, he has gone from HTML beginner exercises to designing 4-layer enterprise systems. If this pace continues, within a year he will likely be building distributed systems, contributing to major open-source projects, or launching a funded startup through RENOA.*

10 Social Presence & Contact

PLATFORM	LINK / INFO
GitHub	github.com/EGABO-TECH
LinkedIn	linkedin.com/in/egaboaaron
X / Twitter	@WanEgabo
Email	aaronegabo@gmail.com
RENOA	Software development firm — co-founded
ESMS Demo	esms-beta.vercel.app
AMA-TUALU	West Nile, Adjumani, Uganda — registered nonprofit

📋 Summary Statement

Egabo Aaron (EGABO-TECH) is a 5-month-old GitHub presence that punches well above its weight. He is a self-directed, mission-driven software engineer from Kampala, Uganda with a clear identity: **build practical, African-localized software that works even when infrastructure doesn't.**

His portfolio spans enterprise-grade institutional software (ESMS), multimodal AI health tools (MedSwift), agentic travel orchestration (ExFlo), civic tech (ACCOMMODATE-ME, AMA-TUALU), and careful foundational learning in C and Rust. He co-founded a software firm (RENOA) and leads a registered nonprofit foundation (AMA-TUALU). The consistency of his thematic focus — solving African community problems with modern technology — and the architectural sophistication of his flagship projects make him one of the most promising emerging developers to come from Uganda's growing tech ecosystem.

Report compiled from: GitHub REST API, raw README files, and live profile page
